Target Stand Plans

This stand will get you VERY close to FITA specifications for height and angle when using a 48“ or 52” target butt. They can be built in just a few hours, for around $25, using treated 1 X 4s and stainless steel hardware. They should last a very long time. 2 X 4s can also be used where the need for stability outweighs the need for portability. The bolts are 3/8 X 2-12“. For 2 X 4‘s use 3/8 X 3” bolts. Use a 3/8” drill bit for a snug fit.
